### 2.1 Investment Rationale

The investment rationale for investing in the Bond and in WTI Crude Oil can be summarised as follows:-

- **Bonus Builder Feature:** Potential 16.1% bonus each year if WTI Crude Oil is above its initial level at the end of each year. The potential bonuses are rolled up and paid at Maturity.
- **Memory Feature:** If any potential bonus is missed, it can be caught up if the conditional return level (above initial level) is exceeded at the end of any subsequent year.
- Investors will receive 100% Participation in any negative performance of WTI Crude Oil on the Final Valuation Date.

Oil is the world's most ubiquitous commodity or natural resource. Oil is extracted in order to produce energy to propel vehicles, to heat buildings, and to produce electricity etc. Oil is also used in the industrial sector as a raw material to make products such as plastics, polyurethane, solvents, and hundreds of other intermediate and end-user goods (e.g. textiles, health and beauty products, medical supplies and household products). Dependency on fossil fuels such as Oil is being reduced or phased out around the world due to its contribution to global warming and its impact on our environment. In the meantime, Oil remains an important component of the energy and industrial production sectors.

Oil Demand: demand for Oil has been relatively stable in 2022 and 2023 and can be expected to be similarly stable in the next 3 years should global economic performance remain positive and stable (notwithstanding the inflation threats and the impact of higher interest rates).

Oil Supply: OPEC supply is currently stable and appears to be organised effectively by these powerful Oil producing countries and regions. Non-OPEC supply (which is traditionally less stable) also appears to be relatively controlled and stable at this time. However, the potential for Supply Side disruption due to wars in Russia/Ukraine and Israel/Palestine (particularly if this conflict spreads elsewhere in the Middle East or causes interruptions to shipping supply channels) is evident in 2024 and beyond. Any interruption to the Oil Supply or to supply chain infrastructure has the potential to destabilise or Oil supply which generally results in higher Oil prices.

#### What is WTI Crude Oil?

West Texas Intermediate (WTI) Crude Oil is a specific grade of crude oil and one of the main three benchmarks in oil pricing, along with Brent and Dubai Crude. WTI is known as a light sweet oil because it contains less than 0.50% sulphur (normally about 0.24% to 0.34%), making it "sweet," and has a low density making it "light."

WTI is the underlying commodity of the New York Mercantile Exchange's (NYMEX) oil futures contract and is considered a high-quality oil that is easily refined.

Like Brent Crude Oil, WTI Crude Oil is considered an oil benchmark, frequently quoted in the media as the price of oil.

## 2.6 Summary Risk Indicator

The Summary Risk Indicator (SRI) is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because BNP Paribas is not able to pay the Investor. The risk indicator assumes the product is held until maturity.

We have classified this product as 5 out of 7, which is the third highest risk class:

The actual risk can vary significantly if the Investor encashes prior to maturity. Investors may not be able to sell this product easily or may have to sell at a price that significantly impacts on how much the Investor gets back.

The Summary Risk Indicator of 5 rates the potential losses from future performance at a medium to high level and poor market conditions are unlikely to impact BNP Paribas' capacity to pay you.

Investors will receive payments in the product's currency, which may be different from Investor's domestic currency. In this case, be aware of currency risk. The final return Investors will get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

This product does not include any protection from future market performance so you could lose some or all of your investment.

If BNP Paribas is not able to pay you what is owed, you could lose your entire investment.

For detailed information about all risks please refer to the Key Information Document (KID) and the risk sections of the Base Prospectus as specified in the section 'Other relevant information' below.

**Warning: If you invest in this Bond you may lose some or all of the money you invest.**

**Warning: The value of your investment can go down as well as up.**

**Warning: Deductions for costs and charges are not made uniformly throughout the life of the Bond, but are loaded disproportionately onto the early period. If an investor sells the Bond prior to the end of the 3 year term, the practice of front-end loading will impact on the amount of money that the investor receives. The investor may not get back the full amount they invested.**

## 2.9 What happens if I die before the Bond Matures?

In the event of death of a sole investor or a surviving joint investor, the Bond may be held by the administrators of the estate until maturity. Alternatively, the Bond may be sold prior to maturity, subject to normal probate regulations, at its realisable value which may be lower than the original amount invested and lower than the Soft Capital Protected amount. The proceeds from the sale of the Bond as a result of death will be paid to your Omnium or Conexim Account or in the case of an insured pension or post retirement investor, to the investing life company.

If there is a choice in restructuring options available to investors, Broker Solutions will advise your Financial Broker who will contact you for your instruction in this regard.
