INVESTMENT RATIONALE:

Equities (shares) as a long term investment: Although investing in equities (shares) involves a degree of investment risk and there will be volatile periods along the way, in the long term, equities tend to outperform other assets like bonds, property, cash etc. By adopting a medium term approach, equity investors can mitigate the risks and short term volatility associated with stock market investment while benefiting from the long term capital growth potential that stock markets can provide.

Stock Market Indices provide a broad representative portfolio of investments in multiple companies or shares. Indexes are often used as benchmarks to gauge the movement and performance of market segments or geographic regions (the Eurozone in this case). Investors generally use indexes as a basis for diverse or passive investing.

The Swiss SMI Index is a Benchmark Index of Swiss shares.

SUMMARY RISK INDICATOR:

The Summary Risk Indicator (SRI) is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because Citigroup Global Markets Limited is not able to pay the Investor. The risk indicator assumes the product is held until maturity. The actual risk can vary significantly if the Investor encashes prior to maturity.
