INVESTMENT RATIONALE:

Equities (shares) as a long term investment: Although investing in equities (shares) involves a degree of investment risk and there will be volatile periods along the way, in the long term, equities tend to outperform other assets like bonds, property, cash etc. By adopting a medium term approach, equity investors can mitigate the risks and short term volatility associated with stock market investment while benefiting from the long term capital growth potential that stock markets can provide.

Stock Market Indices provide a broad representative portfolio of investments in multiple companies or shares. Indices are often used as benchmarks to gauge the movement and performance of market segments or geographic regions. Investors generally use indices as a basis for diverse or passive investing. The S&P 500 Index is a Benchmark Index of US shares.

The hedging feature of the Bond allows investors the opportunity to benefit from the positive or negative performance of the S&P 500 Index within the +32% and -32% Barriers and even pays a 7.5% Rebate Return if the Index performance is outside the +32% and -32% Barriers.

SUMMARY RISK INDICATOR:

The Summary Risk Indicator (SRI) is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because Goldman Sachs is not able to pay the investor. The risk indicator assumes the product is held until maturity. The actual risk can vary significantly if the investor encashes prior to maturity.

We have classified this product as 2 out of 7:
