**Warning: If you invest in this Bond you may lose some or all of the money you invest.**

**Warning: Deductions for costs and charges are not made uniformly throughout the life of the product, but are loaded disproportionately onto the early period. If an investor sells the Bond prior to the end of the 4 year term, the practice of front-end loading will impact on the amount of money that the investor receives. The investor may not get back the full amount they invested.**

- Investing in the Eurozone
- Investing in equities as a Long Term Investment and investing in the EuroStoxx 50 Index

#### ***Equities as a Long Term Investment***

Although investing in equities (shares) involves a degree of investment risk and there will be volatile periods along the way, in the long term, equities tend to outperform other assets like bonds, property, cash etc. By adopting a medium term approach, equity investors can mitigate the risks and short term volatility associated with stock market investment while benefiting from the long term capital growth potential that stock markets can provide.

Stock Market Indices provide a broad representative portfolio of investments in multiple companies or shares. Indexes are often used as benchmarks to gauge the movement and performance of market segments or geographic regions. Investors generally use Indexes as a basis for diverse or passive investing. The EuroStoxx 50 Index is a benchmark Index of Eurozone shares.

#### ***The EuroStoxx 50 Index***

The EuroStoxx 50 Index tracks the Eurozone's supersector leaders, resulting in a diversified and liquid portfolio of 50 Eurozone shares. The index's weighting is based on free-float market capitalisation, with a maximum weight of 10 percent per constituent.

The blue-chip benchmark underlies more than 25 billion euros in ETF assets, while futures and options on the index are the most actively traded equity index derivatives on Eurex. More than 160,000 structured products are linked to the EuroStoxx 50 Index.
